

MEASURE THE OPENING

Accurate measurements are critical for the operation of your garage door. The minimum required sideroom, headroom and backroom may vary according to manufacturer and door style. Take these easy steps to help ensure a proper fitting, smooth-operating garage door.

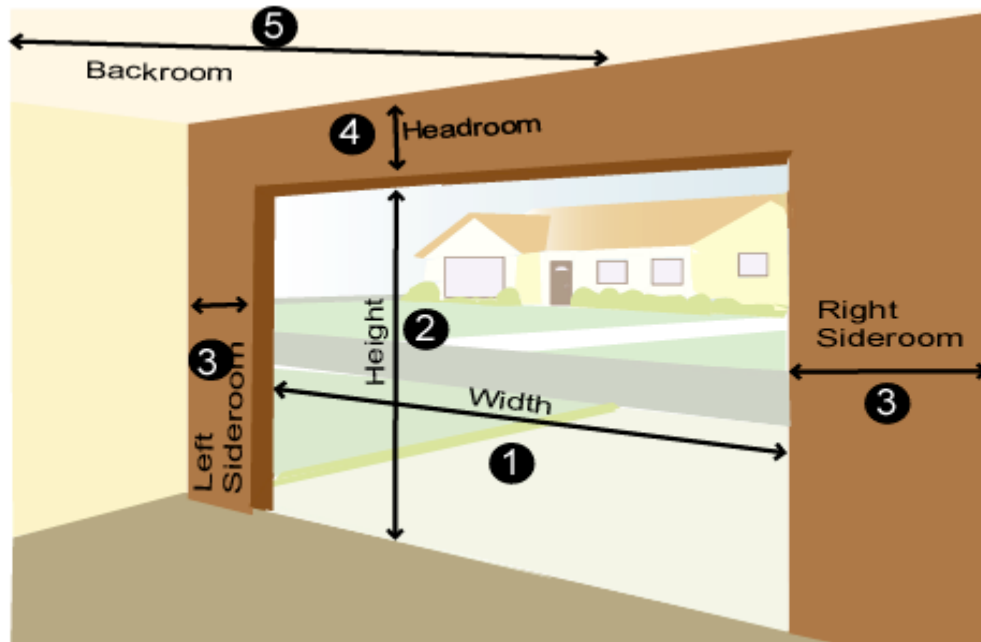

STEP 1. Measure the width of the door opening, from one inside edge to the other.

STEP 2. Measure the height of the door opening, from the floor to the underside of the opening.

STEP 3. Measure the left and right sideroom, the distance from the edge of the door opening to the wall or other side obstruction.

STEP 4. Measure the headroom, the distance from the top of the garage door opening to the ceiling or underside of the joists.

STEP 5. Measure the backroom, the distance from the garage door opening to the back wall of the garage.

Width _____

Right Sideroom _____

Height _____

Headroom _____

Left Sideroom _____

Backroom _____
